

MEETING MINUTES

Date	Thursday 24/03/22
Time	12-4pm
Attendees	Tom, Calvin, Eileen
Apologies	Aj, Daniel
Please have done	Your testing
Meeting purpose	Iteration 2 - debugging, reflecting on Thursday morning leaderboard autotests run
Next meeting	Friday 25 March (tomorrow)

Agenda

Agenda Item	Minutes
Changes that have been made	Fixed auth register and clear/v1 so that the database is cleared properly and correct global_permissions are given
Thursday Help Session feedback	<ul style="list-style-type: none">- Your functions should have been implemented in a way where a helper function is made for every function that requires a token input. Once your token is taken in, convert that token to a user_id and pass that into a helper function, so that other functions can call your helper function's functionality without needing that user's token- Token is only used to verify that user's identity from the wrapper, don't actually need it in your functions <hr/> <p>When checking a token: Ensure that the following does not occur:</p> <ol style="list-style-type: none">1. Invalid token decoding (token is fake)2. User doesn't exist in database3. User is already logged out <p>"When validating a token, you should be able to get a user id from the decoding. Ensure you store the user id inside the token, that way when decode the token, have access to the user id." - Yep we do this already.</p> <hr/>

	<div data-bbox="631 210 1096 415">  </div> <p>We should be abstracting away from the main functions. So in the main functions, don't have double for loops. We should be abstracting using helper functions so the main function is readable.</p> <hr/> <p>Instead of doing for i in range:</p> <div data-bbox="631 756 1190 1014">  </div> <p>Enumerate is way to loop through index and element → more Pythonic</p>
Iteration 2 checklist	<p>Update this Sheets Spreadsheet as you debug your function using Postman and connecting to frontend:</p> <div data-bbox="631 1207 956 1249">  Iteration 2 checklist </div>
Changes to be made for the group	<p>Auth and list_all needs to change</p> <p>Skip past names that start with 'Removed' 'user'</p> <ul style="list-style-type: none"> - Write 1 line descriptions for all your helper functions - By Friday night, remove all print statements
To do now before Saturday morning autotests run	<ul style="list-style-type: none"> - Re-read the spec for your functions - Create extra tests to test each functionality element of your function - Ensure your function works well with other functions - Checkout Frontend functionality to check everything works fine

Iteration 2 delegation:					

Action Items

Person	Action Item	Due Date
Everyone	Take note of changes that have been made today after <ul style="list-style-type: none"> - Re-read the spec for your functions - Create extra tests to test each functionality element of your function - Ensure your function works well with other functions - Checkout Frontend functionality to check everything works fine	Morning of Thursday 24 March (tomorrow morning)
